---

Changes in Toxicity and Contaminant Characteristics: Although the screening levels for PCP, c-PNAs and dioxin are more stringent (for reference see Regional (Region VI) Screening Level Summary Table, November 2010), as long as the Site cap remains undisturbed, the Site is protective of human health and the environment and the remedy selection is still valid.

Is screening level summary table attached or is referring to it??? Does the wording need to be changed?????? Should be simple and not too much in detail
